EDUCATION

Kamla Nehru Institute of Technology

Bachelor of Technology in Information Technology | **CGPA: 8.4**

Sultanpur, India

August 2020 – July 2024

EXPERIENCE

SDE (Full stack & Web3)

November 2024 – Present

Chainscore Labs

Pune, India

- Delivered **20,000+** lines of production code for **TelosX** (Layer-1 blockchain exchange) using **Next.js** and **TypeScript**, including [landing page](#) design and implementation of **Auth0** authentication and **Bitgate WebSocket** for real-time trading data.
- Architected crypto **swaps** to enable **spot/margin** trading Redux Toolkit state management and optimized UI latency by 40%, driving secure, high-frequency trading for 10,000+ users.
- Co-developing Polkadot-JAM (**JOIN-ACCUMULATE MACHINE**), a **decentralized protocol** for **Polkadot**, using **Python** to architect novel computational pipelines (Polkadot Virtual Machine) and consensus mechanisms (Safrole/Grandpa), resolving **blockchain scalability/coherency** trade-offs.
- Currently building a high-performance **SDK** in **C** for the Polkadot-JAM ecosystem. Focused on low-level system design, instruction handling, and virtual machine integration.

Full Stack Intern

July 2024 – October 2024

Elevatifer

Remote

- Developed responsive front-end components and back-end APIs using React, Node.js, and Express, improving website performance and user engagement by **20%**.
- Integrated dynamic REST APIs with Redux state management and implemented robust CI/CD pipelines using Git for efficient deployment and collaboration.

ACHIEVEMENTS

- Contributing to JAM — a groundbreaking protocol upgrade for the Polkadot **blockchain** ecosystem introduced by its founder, Gavin Wood, via the [JAM Gray Paper](#).
- Developed and optimized **20K+** lines of code within **3 months** during my ongoing internship, contributing to feature development, performance enhancements, and codebase scalability.
- Solved **350+** Data Structures and Algorithms questions on **LeetCode**, with a maximum rating of **1529**.

PROJECTS

AI-SaaS | Next.js, React.js, Redux, PostgreSQL, Cloudinary, TypeScript and Vercel.

[\[GitHub\]](#)

- A **SaaS** Next.js application, integrating **cloudinary AI** to enhance smart video preview and efficient media management. Developed a scalable, **server-side rendered** application, demonstrating practical use of modern web technologies.
- Integrated Cloudinary for secure image and video uploads, including handling **transforms** and **downloads** with custom filenames. Utilized **Prisma** with NeonDB and **PostgreSQL** for efficient database management and metadata storage.

Virtual Cart | React.js, Express.js, Node.js, MongoDB, Payment Gateway, and JS

[\[GitHub\]](#)

- Engineered admin panels for product/category **CRUD** operations, integrated Braintree **payment gateway**, and designed checkout/order history workflows.
- Implemented **JWT authentication** for secure user sign-in and sign-out and Leveraged the **RESTful API** architecture to ensure seamless data communication across the platform.

SKILLS

- Programming Languages:** C++, Python, JavaScript, **TypeScript**.
- Web Technologies:** **Next.js**, React, **Redux**, **Node.js**, **PostgreSQL**, WebSocket, **Jest**.
- Tools:** Linux (Fedora), Git/GitHub, Firebase, Postman and VS Code.
- Expertise:** Competitive Programming, Data Structures and Algorithms, Full-Stack Development.
- Courses:** Database Management System, Structured Query Language, Operating Systems.
