EXPERIENCE

Software Development Engineer - Full stack

March 2025 – Present

Chainscore Labs

Pune, India

- Built a responsive, feature-rich UI for a **Web3** staking, casino, and sports betting platform using React, TypeScript, Redux Toolkit, and **GSAP**, integrating **crypto wallets** (Wagmi/RainbowKit) for seamless user onboarding.
- Developed Node.js/Express APIs with WebSocket services for real-time data, **blockchain transaction** handling, and secure **wallet deposit/withdrawal** flows, supporting thousands of concurrent users.
- Co-developing **JAM** (**JOIN-ACCUMULATE MACHINE**), a **decentralized protocol** for **Polkadot**, using **Python** to architect computational pipelines (Polkadot Virtual Machine) and consensus mechanisms (Safrole/Grandpa), resolving **blockchain scalability/coherency** trade-offs.
- Worked on a high-performance **SDK** in **C** for the Polkadot-JAM ecosystem, focusing on low-level system design, instruction handling, and virtual machine integration.

Software Development Engineer Intern

November 2024 – February 2025

Chainscore Labs

Pune, India

- Built the complete trading frontend for **TelosX** (Layer-1 blockchain exchange) using **Next.js** and **TypeScript**, including [landing page](#) design, **Auth0** authentication, and **Bitgate WebSocket** integration for real-time trading data.
- Architected crypto **swaps** to enable **spot/margin** trading with Redux Toolkit state management and optimized UI latency by 40%, driving secure, high-frequency trading.

SKILLS

- **Programming Languages:** C, C++, JavaScript, TypeScript.
- **Frameworks/Libraries:** Next.js, React, Redux, Node.js, NestJs, Express.
- **Databases:** PostgreSQL, MongoDB, NeonDB, Prisma.
- **Tools:** Linux, Git/GitHub, AWS EC2, Firebase, Docker, Postman, Figma.
- **Testing:** Jest, Unit Testing, Integration Testing, API Testing.
- **Familiar With:** Rust, Go, Blockchain.

PROJECT

Quiver - QUIC-Native Distributed Pub/Sub Message Broker | Python, asyncio, aioquic, Ed25519, QUIC/UDP[\[GitHub\]](#)

- Built a distributed publish/subscribe message broker from scratch using the **QUIC protocol** (RFC 9000) over UDP, replacing traditional TCP/WebSocket-based messaging with multiplexed, encrypted streams.
- Implemented **Ed25519** cryptographic identity -peers authenticate via public keys embedded in self-signed TLS certificates, eliminating passwords entirely.
- Designed a 1-byte prefix protocol routing system dispatching incoming QUIC streams to the correct handler (publish, subscribe, unsubscribe) with zero parsing overhead.
- Engineered a dual-role **QuicNode** acting as both client and server on a single UDP socket, managing connection lifecycle, CID rotation, and session ticket-based **0-RTT resumption**.

MergeMe | MERN, Razorpay Payment Gateway

[\[GitHub\]](#)

- Built a Tinder-style developer matchmaking platform using MERN, Redux Toolkit, featuring swipe-based matching, connection request workflows, editable profiles with skills tagging, and Razorpay-powered premium subscriptions.
- Designed and implemented a RESTful API with 10+ endpoints across auth, profile, connection-request, user-feed, and payment modules, secured with cookie-based JWT middleware and bcrypt password hashing, and deployed the backend on AWS EC2 with CORS-configured cross-origin support.

ACHIEVEMENTS

- Contributing to [JAM](#), a groundbreaking protocol upgrade for the Polkadot blockchain ecosystem introduced by its founder, Gavin Wood, via the JAM Gray Paper.
- Delivered production-ready features across frontend and backend layers within **3 months** of internship, contributing to performance enhancements and codebase scalability.
- Solved **350+** DSA problems on **LeetCode**, with a maximum rating of **1529**.

EDUCATION

Kamla Nehru Institute of Technology

Bachelor of Technology in Information Technology | CGPA: 8.0

Uttar Pradesh, India

August 2020 – July 2024
